

Avionics Technician

Thrust Flight has been one of the fastest growing flight schools in Addison, TX and is excited to be expanding to include avionics services! Our technicians not only have the opportunity to work on a wide variety of piston aircraft (from a fleet of Czech Sport Aircraft to a Cessna 310R bearcat) our long-time partnership with Dynon has made us the premier installer for their new Cessna 172 STC! With experienced mechanics and technicians on our staff, Thrust Flight avionics is the perfect place for the new technician fresh out of school or the seasoned veteran in general aviation.

Job requirements:

- A&P license
- Full time
- Ability to read and interpret wiring diagrams and drawings
- Basic tools for electronics (wire strippers, multimeter, etc.)
- Able to lift up to 50 pounds
- Able to pass drug and background tests

Job description and responsibilities:

- Install, troubleshoot and repair of avionics and autopilot systems.
- Fabrication and troubleshooting of wire harnesses.
- Function testing of avionics and electrical systems.
- Periodically assisting maintenance staff with moving aircraft in hangar.
- Able to communicate effectively and cordially with coworkers and managers to ensure quality work in an efficient and appropriate time frame.

Addison Airport is one of the busiest general aviation airports in the country with over 100,000 operations per year. This makes it the perfect location for Thrust Flight Avionics to provide outstanding service to our customers and consistent work flow for our employees.

There's never a dull moment at our maintenance and avionics facilities at Thrust Flight. Our perfect location and knowledgeable staff are the perfect combination for those looking to learn and do more in the avionics field. From radio installations to complete avionics system installation, Thrust Flight avionics does it all!
